

Introduction

Welcome to the future of traditional and digital learning environments: Omega Notes. Using this modern learning software concept discussions don't have to stop in the classroom and learners are able to personalize and communicate with their peers like never before.

Omega Notes is designed to allow instructors the ability to take pen and paper learning to the digital realm, what sets it apart is the reflective and team-centric communication features. Omega Notes provides the professor with three key components for noticeable learner impact: content and satisfaction based assessments, learner communication, and student processing resources such as annotation tools.

Assessments:

Through Omega Notes, you will receive unprecedented opportunities to assess the engagement, satisfaction, and comprehension of content assigned to learners. Each reading will provide engagement breakdowns to track the extent to which learners interact with the reading by tracking their activity timelines. Beyond seeing engagement, the professor is able to receive feedback on the reading with a focus on learner perspective, through this student input the professor will be able to modify and seek additional resources depending on the ability for readings to resonate with students.

Lastly, the professor can embed multiple choice and short answer assessments within the reading to gauge the relationship of content with learner comprehension. The results are easily accessible for reflection and allow the students to transition from learning to assessment smoothly without having to access a new platform.

Communication:

Using three forms of communication cards enables classroom collaboration to truly exist anywhere the student has access to the internet. The students can share ideas, collaborate in reflection, and help address confusion through self-paced feedback.

Processing:

Above are the exemplary methods the professor can take traditional reading assignments and increase the data received, but Omega Notes also keeps the learners understanding at the forefront of design. Beyond utilizing the discussion methods to share takeaways and help the understanding of peers the program offers advanced note taking resources for the document students read to mark the passage as they need to best understand.

Throughout this manual, you will receive the tools to leverage the features of Omega Notes to maximize the impact of advantageous software and utilize Omega as a distinguishing resource to obtain optimal learner engagement. The following pages will provide control keys as a quick guide to using Omega Notes and the remainder of the manual will provide instructions on utilizing the various features provided within the website.
